Problem Statement

The Challenge

HR teams and employees struggle to identify skill gaps relative to current job market demands and internal role requirements. There is no systematic way to compare an employee's current proficiency against role requirements and generate a personalised upskilling roadmap.

Build a GenAI system: Employee profile + Target role → Gap Analysis + Personalised 6-Month Learning Path

Objectives

Deterministic Skill Assessment

Accurately identify gaps by comparing proficiency against standardized, industry-specific role requirements.

AI-Driven Career Insights

Leverage advanced LLMs to provide professional, personalized feedback on career positioning.

Targeted Course Recommendation

Automatically suggest the most relevant, highly-rated Udemy courses for exact skill deficiencies.

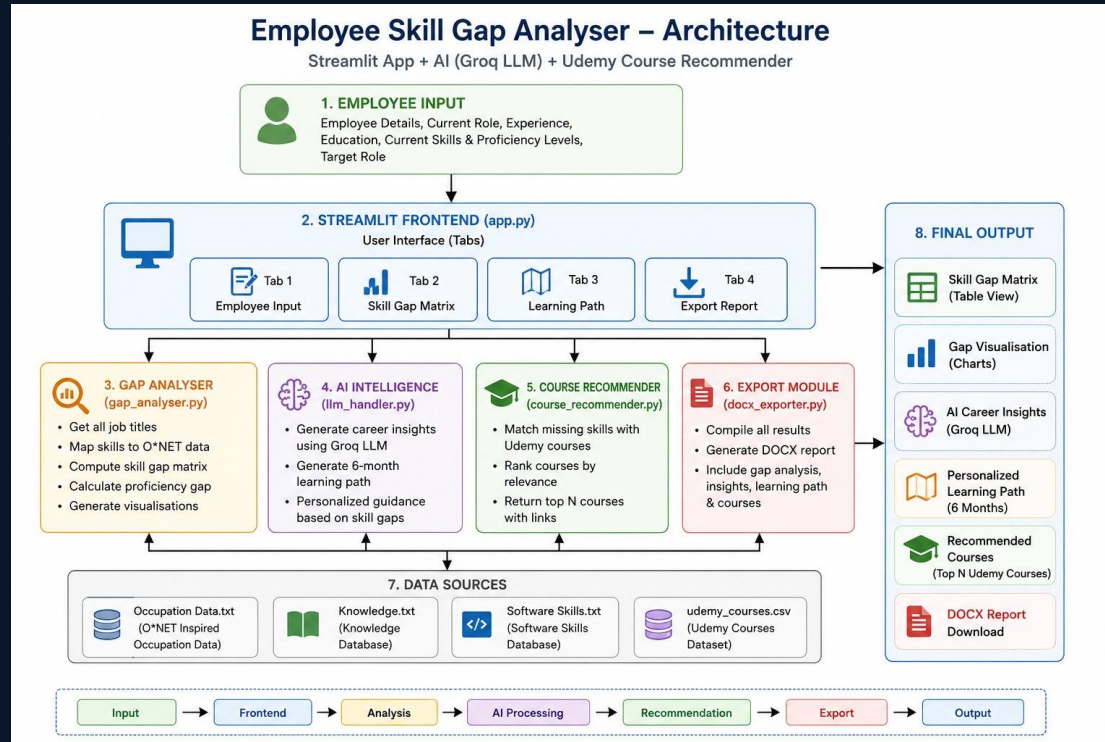

Structured Upskilling Roadmaps

Generate personalized 6-month study plans with actionable weekly learning milestones.

Streamlined HR Reporting

Automate creation of comprehensive, data-driven skill gap reports as downloadable DOCX files.

System Architecture

Expected Deliverables

01

Skills & Role Input

Employee's current skill profile + target role selection from 900+ O*NET occupations

02

Skill Gap Matrix

Color-coded table showing present vs. required proficiency levels for all role skills

03

6-Month Learning Path

AI-generated personalised plan with month-by-month breakdown and weekly milestones

04

Course Recommendations

Auto-matched Udemy courses per skill gap with difficulty level and direct links

05

DOCX Progress Tracker

Downloadable Word document with gap matrix, learning plan, and checkbox progress tracker
